Web Application		Web Based ERP (Enterprise Resource Planning)	Team Size:-4
Title			
Environment		ASP.NET 3.5, C# , SQL Server 2008	
Role		Software Developer	
Description:			
<p>1] Material Management This system is Web based ERP (Enterprise Resource Planning). In this system I have completed Material Management Module .This module is ideal for industries seeking fool proof of the flow and management of material information in their enterprises-from purchase management to aspects of production and sales.</p> <p>2] Sub Contracting In subcontracting, vendor (the subcontractor) receives components from which it produces a product. The product is then ordered by your company through a purchase order. The components required by the vendor to manufacture the ordered product are listed in the purchase order and provided to the subcontractor. The components can be determined by the system via a bill of material.</p> <p>3] Sales & Distribution The Order Entry module allows you to enter orders and sales returns and print invoices, credit notes, order confirmations, picking slips, and shipping labels. You can track transaction details and sales information on-screen and in printed reports. Order Entry integrates fully with Inventory Control and Accounts Receivable, so you always know your inventory levels and the status of your customer accounts. Sales module implements functions of order placement, order scheduling, shipping and invoicing.</p>
